AN INNOVATIVE PARTNERSHIP

Due to their complementary nature and their geographical proximity, Institut Curie and Institut Mutualiste Montsouris have pooled their medical and scientific skills and their respiratory medicine resources by creating the Institut du thorax Curie-Montsouris.

THE AIMS OF THE INSTITUT DU THORAX CURIE-MONTSOEURIS

- To improve the care and treatment of patients with chest diseases.
- To pool all skills so as to achieve overall care for cancer of the lung, pleura and mediastinum.
- To ensure access to innovation at all stages of the disease.

ABOUT INSTITUT CURIE

A leading player in the fight against cancer, Institut Curie boasts an internationally-renowned research center with a state-of-the-art hospital group that treats all types of cancer, including the rarest forms.

Founded in 1909 by Marie Curie, Institut Curie has three sites (Paris, Saint-Cloud and Orsay) with over 3,400 researchers, physicians and caregivers working in support of its three missions: research, treatment, and the preservation and dissemination of knowledge.

Our project for the future, the 2015-2020 institutional project (MC21), is directly inspired by the model created by Marie Curie in 1909 to gather researchers and physicians together so as to bring new treatments to patients as quickly as possible.

ABOUT INSTITUT MUTUALISTE MONTSOEURIS – IMM

Created in 1999 after the merger of the University of Paris’ International Hospital and the Porte de Choisy surgical center, the IMM is a private health institution of collective interest accessible to all without additional non-reimbursed fees.

It is multi-disciplinary, offering care through a medical and surgical team from a number of fields. The IMM is a center for excellence in research and teaching, is at the forefront of technological innovations, and is one of France’s top institutions.

THE AIMS OF THE INSTITUT DU THORAX CURIE-MONTSOEURIS

- To improve the care and treatment of patients with chest diseases.
- To pool all skills so as to achieve overall care for cancer of the lung, pleura and mediastinum.
- To ensure access to innovation at all stages of the disease.
ACCELERATING ACCESS TO THE LATEST INNOVATIONS AND TO EARLY TRIALS

A PERSONALIZED COURSE OF CARE

Treatments for chest diseases are becoming increasingly personalized and require the expertise of multi-disciplinary teams.

The collective expertise at Institut Curie and the Institut Mutualiste Montsouris provides overall care for patients, discussed in a multidisciplinary consultation meeting (RCP) involving an expert practitioner in each specialty at the Institut du thorax Curie-Montsouris.

The aim of the Institut du thorax Curie-Montsouris is to create an individualized course of care for the patient, for which each step (screening, diagnosis, treatment and follow-up) will be managed by a multi-disciplinary team that is flexible, humane, quick and efficient, from the very first appointment onward.

Patients also have access to the medical environment of both organizations and a cutting-edge technical platform for medical imaging, biopathology and radiotherapy.

RESEARCH AND TEACHING

The strategy of the Institut du thorax Curie-Montsouris lies in research’s ability to innovate and to offer new treatments, both medical and surgical. Clinical trials, including early ones, concerning the immune response in particular, lie at the heart of the project.

The Institut du thorax Curie-Montsouris thus relies on a cutting-edge technical platform, the most complete one in the Paris region. Its role is to offer patients therapeutic innovations and to take part in research into chest diseases.

« Clinical research lies at the heart of the project, offering access to early trials for as many patients as possible. The Institut du thorax Curie-Montsouris thus has access to translational research, vital for therapeutic innovation, which requires a shared biological resource center. »

PROF NICOLAS GIRARD
HEAD OF THE INSTITUT DU THORAX CURIE-MONTSORUIS
